

New Larger European Lock Jacket is now available

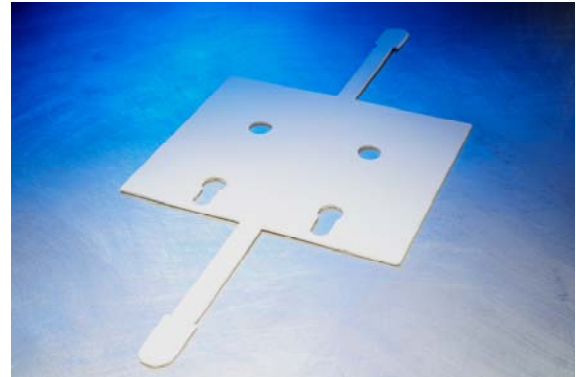

If the lock or latch of a fire resistant door is unprotected, it inevitably reduces the door's fire protection performance.

Lorient currently provides a universal lock jacket which enables family groups of mortise locks to be incorporated in fire resistant door leaves.

But now a new lock jacket is available to suit the larger European DIN standard lock size and it has been proven to provide 30 minutes fire protection.

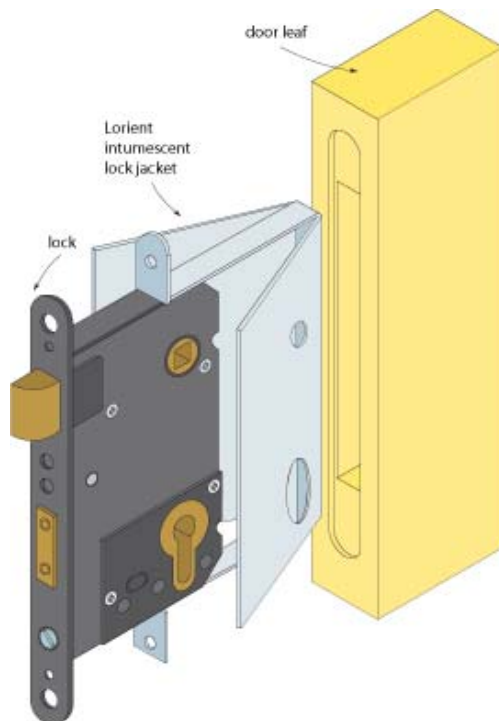

- Tests have proven suitability for locks with a common height of 165mm and verify a performance of 30 minutes fire protection to meet the requirements of the BS 476 Part 22:1987.
- Both lever and cylinder operators are covered, and there is no requirement for additional intumescent material to be placed behind the strike plate or for the door and/or frame seal to be continued past the forend or strike plate.

Fitting Instructions

Fitting is completely clean and dry.

The jacket is comprised of a one-part envelope, supplied with self adhesive backing, which simply wraps around the kit for a neat and easy installation.
